

ENVAULT REMOVABLE MEDIA PROTECTION

Protection

Control

Visibility

Password free means freedom

FORGET PASSWORDS. THERE'S A NEW, MUCH EASIER WAY TO SECURE YOUR COMPANY DATA ON ANY REMOVABLE MEDIA.

Envault protects your company data against unauthorized access with an easy-to-use and password free technology called "envaulting".

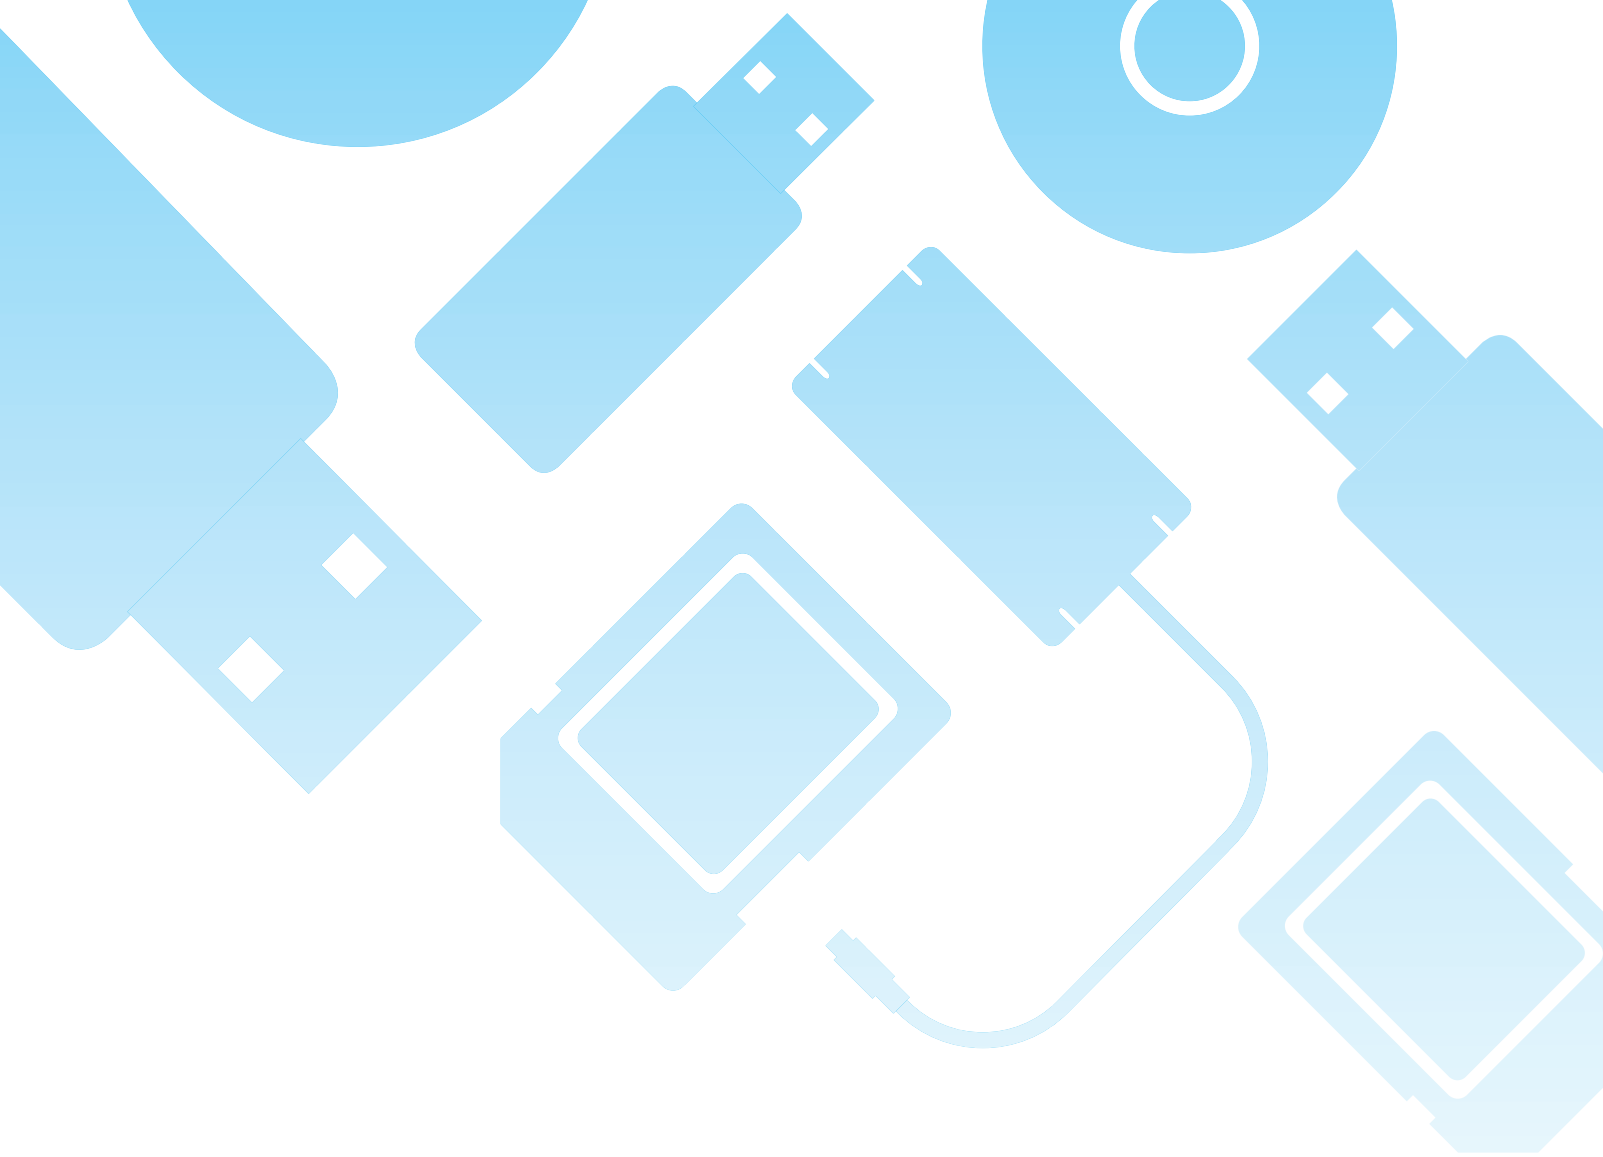

Envaulting makes data protection fully automatic and transparent for your end-users. With just one click, a storage device becomes envaulted the moment it is connected with a corporate workstation. After that, the envaulted data works just as before – anywhere within your organization.

This means that your employees won't have to learn anything new or make any security decisions. Envaulting handles everything according to your centrally chosen security policies, which means human error is no longer a factor in your data security.

**DATA
LEAK**

**PASS
WORDS**

**DATA
THEFT**

You're in control

Envault extends your corporate data security envelope to include all removable mass storages and media. This means your data security is right where it should be – firmly in the hands of your IT administration and management.

ENFORCE PROTECTION, READ-ONLY ACCESS OR FULL BLOCK

Your IT administration team can easily define and manage proper security policies for your user groups through MS Active Directory. You can choose policies from existing Envault templates or create your own.

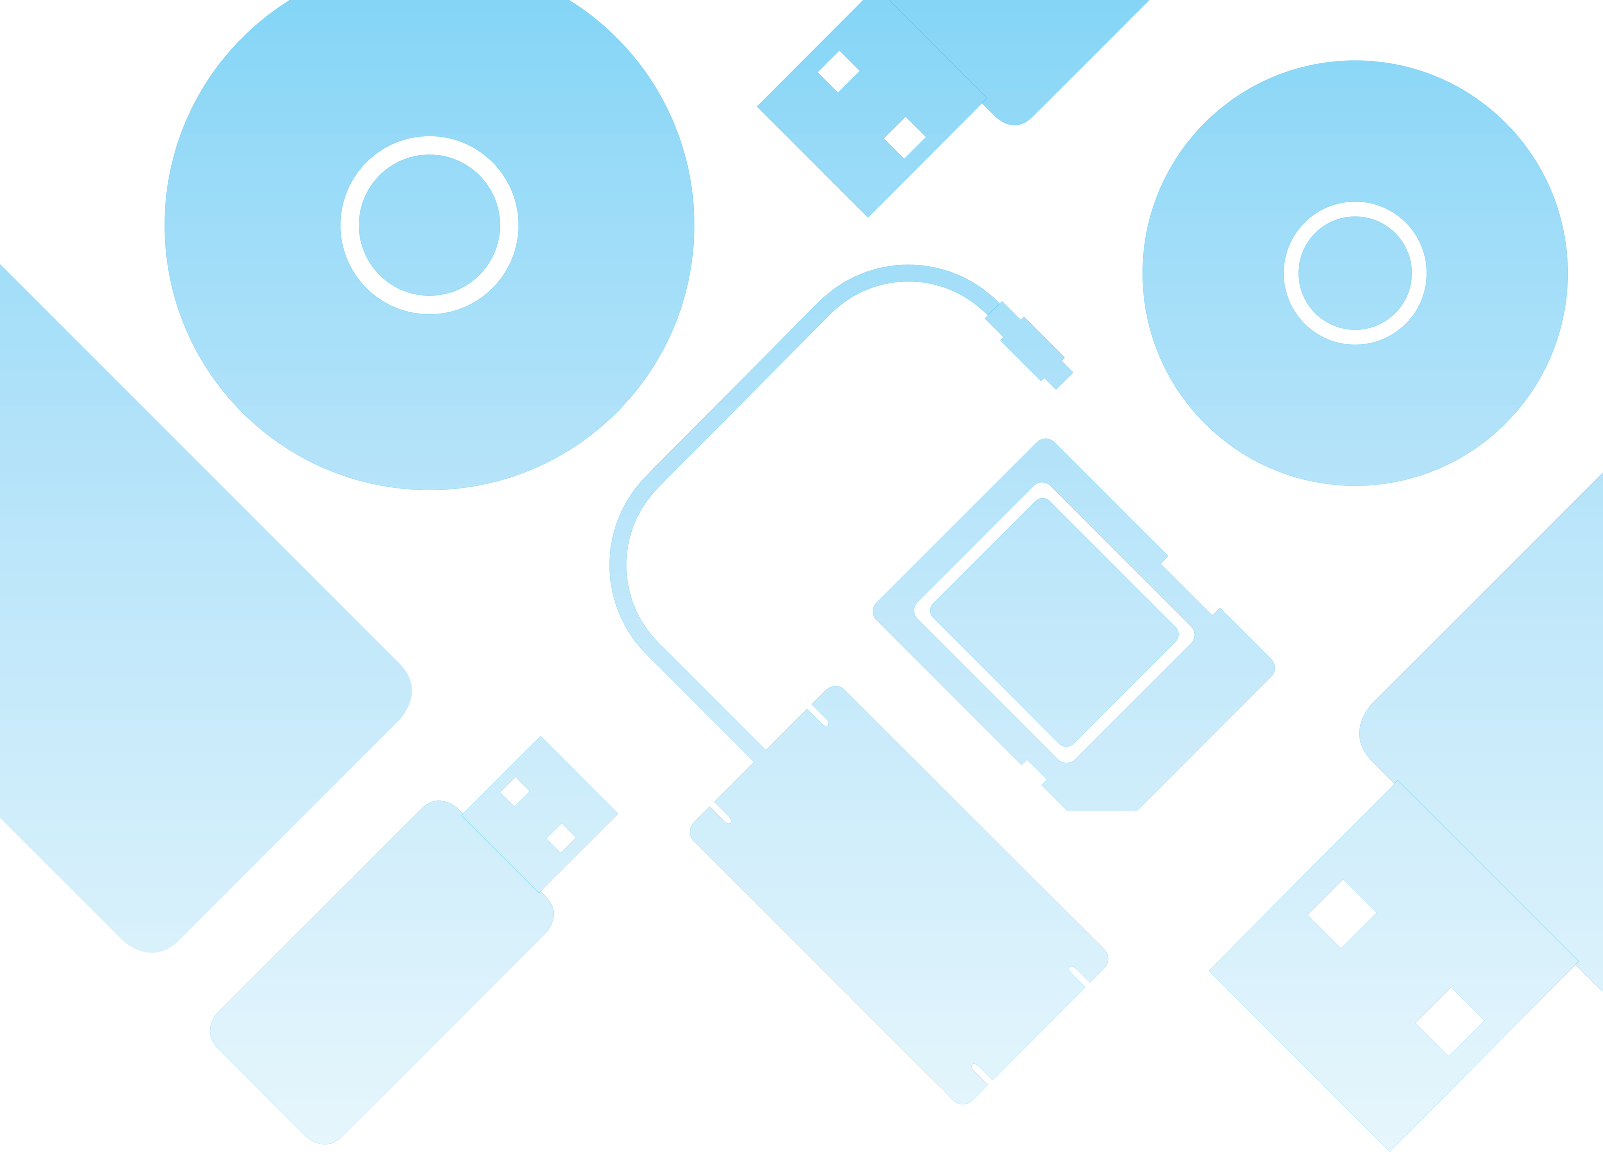

YOU CONTROL WHERE YOUR COMPANY DATA IS AVAILABLE

With envaulting, there are no end-user choices. You centrally define where, how, when and who can open

or copy company files. You define which users or user groups can take files outside your organization and which cannot. You can even decide how long envaulted data can be read outside your organization. After envaulting, you'll also no longer need to worry about storage devices leaving the office in the pockets of departing ex-employees.

REMOTE CONTROL: SUSPEND OR NEUTRALIZE LOST DEVICES

An envaulted storage device lost outside your office is completely harmless. But if you want to disable a device lost inside your own offices, you or your IT administration can remotely deny access to it with a simple mouse click – anywhere, anytime.

Visibility like never before

Envault allows auditing of all file accesses and generates automatic usage statistics and reports, so you have full visibility over your company data and how it has been used – online, offline, and even on non-corporate computers.

YOU'LL BE INSTANTLY ABLE TO ANSWER THE FOLLOWING QUESTIONS AND MORE:

1. How many portable storage devices are being used in our company?
2. What files are stored on portable storage devices?
3. Who is using portable storage devices?
4. How was a certain USB stick used while out of the office?
5. How much data would we have lost last month without Envault?

QUICK TO DEPLOY TOO, SO YOU'LL SAVE RESOURCES

Envaulting your entire organization is both quick and easy – you will be protected in one day. Our product includes a lightweight driver that, once centrally pushed to workstations, controls all external storage devices. After this your employees can protect each of their devices from the first time they use them. With a single click, envaulting transforms your employees' portable storage devices into powerful and handy tools, while keeping your corporate data confidential.
